A toe in the water of the flipped classroom

Abstract

Jo Kellaway has started to produce material that her classes are using to help with learning both before and after the lesson. The material is in the form of short videos and screen-captured activities. This workshop will discuss some of the successes and issues that she has had in the production of the materials. Time will also be available to discuss and share ideas on what others have done in this area.

Jo has been teaching for longer than she cares to admit. She has spent the last 12 years teaching at the Australian Science and Mathematics School where she is currently head of mathematics. She has always had an interest in technology and how it can be used in the classroom to benefit learners. To this end she is always willing to 'play' with the latest 'toy' to see if it is helpful. She has been developing 'flipped resources' for the past year.

AITSL standards:

2.1 Content and teaching strategies of the teaching area
2.6 Information and Communication Technology (ICT)
6.3 Engage with colleagues and improve practice
